The **Association for Facilities Engineering (AFE)** is a professional membership organization serving all professionals working in the built environment. Just as in social science, AFE defines the term, *built environment* as the surroundings people construct to provide settings for human activity and interaction, ranging in scale from buildings to parks, often including their supporting infrastructure such as water supply and energy networks.

The first public recognition of the plant engineering profession was in New England, the cradle of American industry. The story of the Association for Facilities Engineering (AFE) began in Boston, Massachusetts in 1915.

Membership Benefits

- Network with others in the profession (members directory) with local facility tours
- Solve problems and find answers to technical problems through several networking avenues
- Webinars with timely information on trends, topics, and technology in 60 minutes
- Each live webinar is recorded for future member download
- Professional Development; Certified Professional Maintenance Manager (CPMM), Certified Plant Engineer (CPE), Certified Professional Supervisor (CPS)
- Members receive the highly regarded, information packed AFE Facilities Engineering Journal 4 times/year with access to the online archive of articles from past issues
